What's New In Lazesoft Windows Recovery Professional?

Recover your lost or damaged Windows installation with Lazesoft Recovery Professional v.2.0. Lazesoft Window Recovery Professional(LPRP) gives your PC a new life with a few simple steps. LPRP can boot your Windows installation from different computers and/or media(including CD/DVD), so you can choose the easiest way to perform a complete recovery. Furthermore, if the original boot drive is damaged, you can also recover it. Moreover, LPRP supports both FAT and NTFS filesystems, allowing you to recover the files from different Windows editions. The easiest way to recover: First of all, you need to load the Lazesoft Recovery Professional software. LPRP will launch a wizard that allows you to select the drives that you want to recover. Once you have selected the drives that you want to recover, you will be prompted to choose the backup medium(either a bootable USB, CD/DVD, or another PC) that you want to use to recover the files. Your PC will be booted in the backup medium, which is selected from a list of possible options. If the original boot drive is damaged, then you will be prompted to select another drive to use as a backup source. When you are done, the last step is to select the recovery options you want to perform. Once the recovery is finished, LPRP shows a log of the steps performed. Finally, the program will show the list of recovered files. LPRP can be used in recovery from any combination of driver(including graphics) or operating system(including Windows or Linux) related problems. Suitable for both beginners and professionals: Besides the different recovery modes, LPRP can also help you perform a complete recovery: * From a non-working computer. LPRP will find a working computer and install the boot menu and the operating system from it, without the need of another PC. * From a damaged boot drive. You may use LPRP to repair the boot sector (the first sector of a hard drive) or the boot file, using the correct drivers (obtained from the CD/DVD used to install) and a compatible MBR. * From a PC that is not connected to the internet. By setting LPRP to offline mode, you can start the recovery even if the PC has no

internet connection. * From an old PC that has a slow memory. LPRP can replace all of the already installed files
